CONTENTS

Introduction

Consumer demand is driving requirements for rich media streaming, cloud-based storage, data mining, analytics and machine learning applications, accelerating the need for next-generation high-speed network access, high performance computing and data processing in Cloud/Hyperscale Datacenter environments. Connectivity between datacenters – known as datacenter interconnect (DCI) – and higher bandwidths are moving the industry towards 400GE solutions for faster data switching and routing performance. Data mining analytics and machine learning applications have spurred the development of technology that allows faster GPU/ASIC processing speeds while increasing the quantities of these devices per line card – all of which results in high component and power densities.

With the convergence of these factors, ensuring the reliability and long-term performance of datacenter electronic components is essential and facilitated by advanced connecting, protecting and thermal management materials. As the largest global innovator and supplier of adhesives, functional coatings and sealants, Henkel is the market leader for advanced material solutions to enable the future of datacom applications.

Thermal Control

Depending on the application, Henkel has multiple thermal interface material (TIM) solutions to support improved system-level performance and reliability of high-power density line cards through effective thermal management. A range of formulations in pad, film, liquid and gel mediums provide effective and efficient heat dissipation in large, high-performance Layer 1/Layer 2 Switch ASIC, FPGA and GPU devices used in next-generation network equipment and high-performance computing servers. For IC devices that do not require a larger heat sink attachment, Henkel's low modulus, high conductivity BERGQUIST® GAP PAD® deliver excellent conformability and low stress thermal performance. As an alternative to conventional thermal greases, BERGQUIST® phase change TIMs allow for similar ease-of-application and flexibility in a paste-applied formula that becomes liquidus at specific temperature. However, BERGQUIST® phase change TIMs do not suffer from the “pump out” and reduced thermal performance over time generally experienced with grease.

Phase Change Material – Film and Paste

Product	Description	Key Attributes	Thermal Conductivity (W/m·K)	Volume Resistivity (Ω·m)	Dielectric Breakdown Voltage	Thickness (mm)	Flammability Rating
BERGQUIST® HI-FLOW THF 1600G	Thermally conductive 55°C phase change compound coated on a fiberglass web. Designed as a thermal interface material between a computer processor and a heat sink	• Thermal impedance: 0.2°C·in^2/W at 25 psi • Will not drip or run like grease • Phase change compound coated on a fiberglass carrier	1.6	1x10^8	300	0.127	UL 94 V-0
BERGQUIST® HI-FLOW THF 1600P	Thermally conductive 55°C phase change compound coated on a thermally conductive polyimide film	• Thermal impedance: 0.13°C·in^2/W at 25 psi • Field-proven polyimide film with excellent dielectric performance and cut-through resistance • Outstanding thermal performance in an insulated pad	1.6	1x10^{12}	5,000	0.102 – 0.127	UL 94 V-0
LOCTITE® TCP 4000 D	Non-silicone, reworkable phase-change material supplied as a paste that can be stenciled, needle-dispensed or screen-printed onto a heat sink, base plate or other surfaces	• Reworkable • Highly efficient thermal transfer • Thixotropic above phase change temperature	3.4	–	N/A	0.025 – 0.250	–
LOCTITE® TCF 4000 PXF	Grey, non-silicone reworkable phase change thermal interface material designed	• Low thermal resistance • Nonsilicone • No pump-out, dry-out or pull-out	3.4	–	–	0.2	–

Product	Description	Material Thicknesses (Mil)	Phase Change Temperature	Operating Temperature	Thermal Conductivity (W/M·k)	UI Flammability Rating
BERGQUIST® HI-FLOW THF 5000UT	Reworkable phase change thermal interface material suitable for use between a heat sink and variety heat generating components	8, 10, 12, 16	45°C	-40 to 150°C	Multiple Thickness, ASTM D5470 5.3 Thin Bondline Materials, modified ASTM D5470 8.5	UL 94 V-0

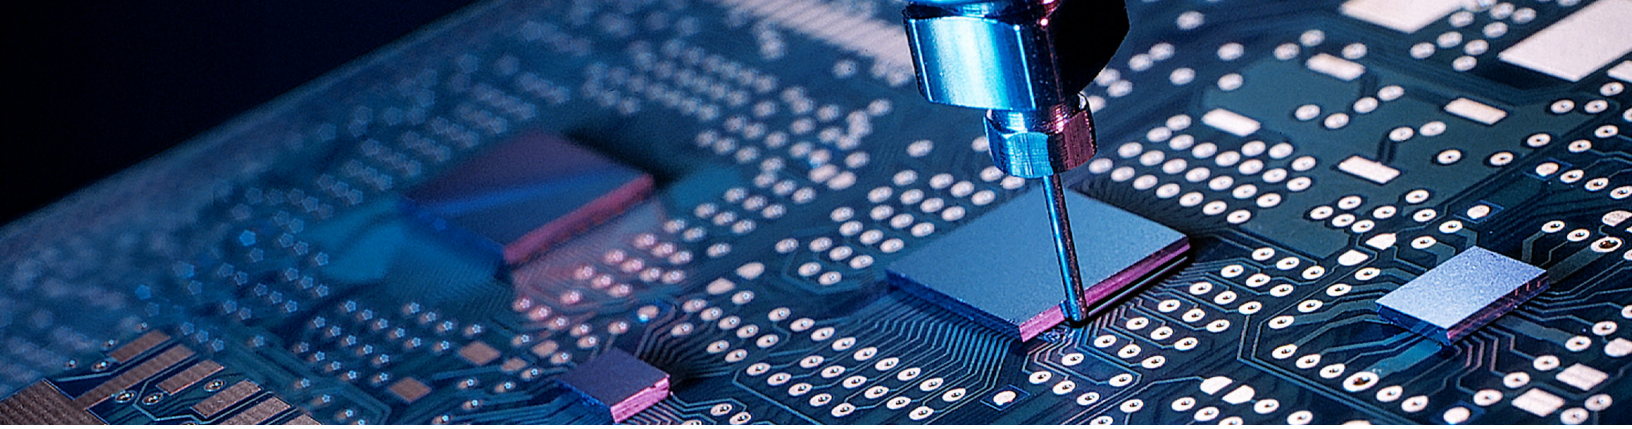
LOCTITE® 3875	Bead on Bead – Acrylate	1.75	Activator or Heat	–	–	2,400



Long-term Device Protection

As interconnect density on array devices increases and dimensions decrease, protecting components from stress reduces failures and safeguards functionality. Advanced LOCTITE® brand underfills offer improved mechanical integrity and reliability for fine-pitch array components used in high performance computing and data processing ASICs. Available in reworkable and non-reworkable formulations, LOCTITE® underfills effectively protect component interconnects with low bump heights.
