

KDL/E+

High packing density and effective strain relief

Our KDL/E+ is a completely splittable cable entry system, routing terminated and unterminated cables safely into cabinets and enclosures.

KDL/E+

Higher density and strain relief

Properties that impress:

High compression & strain relief

The updated frame design provides effective compression of the cable entry system, resulting in a dust and water-tight ingress protection rating and high strain relief.

Higher packing density & variability

It enables individual solution options through additional, stackable center parts as well as modular standard and specialty grommets.

Better cleanability

The rounded edges and smooth surfaces of the cable entry prevent particle accumulation on the cable entry system. The rubber connectors of the grommets can be removed after installation to ensure an even smoother finish.

Quick assembly & maintenance

As it is a splittable system, the connectors do not have to be removed when assembling, disassembling or replacing cables (warranty preservation).

Technical information

Protection class IP 65
Fire protection after UL94-V0 RoHS-Conformity
Temperature resistance -30°C to 100°C (-40°F to 212°F)
UL Type 12
